IMPACT AND CITATION ANALYSIS

Dr. Claessen is an NWO Vidi Laureate with a strong expertise in the role of the cell wall in bacterial growth and development, and he recently expanded this research theme to the biology of cell wall-deficient cells. All microbial cell biology expertise groups in Leiden, including that of the applicant, are organized in the Centre for Microbial Cell Biology, which includes the labs of Prof. Gilles van Wezel (cell division and antibiotics discovery in actinomycetes), Prof. Ariane Briegel (chemotaxis and electron cryotomography), Dr. Wiep Klaas Smits (*Clostridium* pathogenicity), and Dr. Remus Dame (chromosome structure). This Centre provides optimal resonance between the groups and maximal exploitation of the available infrastructure to develop innovative cross-boundary technology platforms. The majority of funding in the Claessen lab is obtained from the Netherlands Organisation for Scientific Research (NWO, Domain of Applied and Engineering Sciences). Most notably, Claessen received the prestigious **VIDI grant** for studying heterogeneity in filamentous actinomycetes. Previously, Claessen was awarded prestigious fellowships from EMBO and Marie Curie (2005-2007, 2009). In total, Claessen attracted more than 2.5 ME. The most important output indicators in his field are articles in peer-reviewed journals as a first or corresponding/last author. Claessen has over 40 publications in peer-reviewed journals, including Nature Communications, Nature Reviews in Microbiology (2x), Genes & Development, Open Biology (2x), Trends in Microbiology (2x), Molecular Microbiology (5x), Scientific Reports (3x), Frontiers in Microbiology and eLife.
